

Assembly lines for sensors and optics

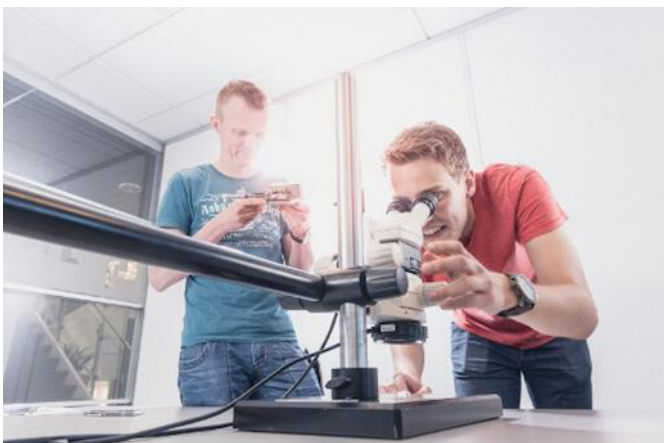

IMS production automation

IMS (Integrated Mechanization Solutions), based in Almelo in, the Netherlands and in Szczecin in Poland, develops and supplies high-accuracy production systems. We are specialized in building, machines or semi-to-full, automated assembly lines and process automation for small, complex products and assemblies in MEDICAL, AUTOMOTIVE, PHOTONICS, SMART DEVICES and SEMICON.

Partnering optima forma, to optimize your production

The customer owns the process, we develop the machines. We use the customers' knowledge and specifications to identify the necessary process steps and assess the manufacturability of their products with these processes. In order to verify the good functioning of these processes, we use test set-ups, prototypes and simulation tools. The results form a reliable starting point for developing a assembly line.

Dedicated Machines

We design and build dedicated machines for your process optimization. Our technical knowledge likes to be challenged by your business cases. We deliver machines throughout the world without restrictions and have an installed base of over 700 machines.

Assembly lines

Our assembly lines are scalable in capacity, capable of a high-mix and flexible in layout. When developing a assembly line, we combine our existing knowledge with technology that is available on the market. We use our knowledge and broad experience in various manufacturing technologies to deliver the best possible assembly lines.

Professionals with a shared passion

Our team consists of 120 professionals with a shared passion for technology and a sincere commitment to making every project a success. We offer plenty of challenging work for experienced and graduate technicians especially in the fields of electrical engineering, mechanical engineering and technical physics.
