

Connecting Mine to Application

JL MAG Rare-Earth Europe is a subsidiary company of JL Mag Ganzhou China. With mining and production facilities of strategic Rare Earth elements at its disposal the focus is placed at the availability, security of supply and recycling of Rare Earth elements, a high level of production technology and the contribution of knowledge in the field of materials and material properties in their relation to their magnetic function.

From the very heart of Brainport Eindhoven (The Netherlands), one of the most innovative regions of the world, JL Mag Europe has successfully introduced its unique business model to their target markets:

- E-Mobility
- Renewable Energy
- Industrial Automation
- High Tech Systems
- Water/Air/Soil and Nano Technology
- 3C Applications

Meanwhile our production facilities in China have been audited according VDA 6.3 and released for Mass production.

JLMAG Ganzhou Plant Q4 2020

In parallel we keep embracing our "Cradle to Cradle" concept by making our Separating Technology available to our customers, which makes it possible not only to recycle all "Production Wastes", but also recycle finished magnets in a "end of life" situation.

JLMAG EU Expertise & Sales Office

Together with the extensive Heavy RE (Dy/Tb) reduction program of our Parent Company and our market leading GBD capabilities, our dedicated team of Application engineers has a strong focus on Design Optimization, Project development and Magnetic Measurement Expertise.

The individual elements of our business model compile together form a "full Circle of Capabilities".
