LPW - more than cleaning

LPW Reinigungssysteme GmbH is one of the leading providers of high-quality systems and process technologies in industrial component cleaning with water-based media. The systems are used in all classic industrial sectors. With the High Purity division, the company is also a sought-after partner in sectors with fine and ultra-fine cleaning tasks such as medical and sensor technology, the optical and semiconductor industries as well as in the aerospace industry. Furthermore, customers rely on the expertise in the field of 3D printed components. The LPW spectrum includes standard and individual solutions for optimizing production processes in terms of availability and quality.

The configuration of all established, but also new, innovative cleaning and drying processes with modular components, according to the respective process requirements, represents a clear unique selling point of the company. With global service and the application engineering division, LPW offers a big portfolio of services. In addition to general and customer-specific training programs, the monitoring and optimization of production processes from the point of view of technical cleanliness, the company is also able to offer contract cleaning capacities for ultra-fine cleaning tasks in the clean room-based LPW test and service center.
