

realizing your innovation.

That's the spirit!

Lucassen Groep will manufacture and assemble your innovative ideas enthusiastically and precisely, right down to the micro level. We'll pull out all the stops: there's no such thing as 'impossible'. We love getting our teeth into the most complex challenges. That is why we invest in having the latest technology in our equipment and software, in cleanrooms and (of course) in the knowledge and know-how of our motivated team. Constantly.

High-tech people for high-tech markets. Our components provide important solutions in the most advanced devices, for instance such as the chip and automotive industries, healthcare and aerospace.

Our strong points are:

- precision machining: producing finely machined parts that meet the highest cleanliness requirements in a wide range of materials.
- cleanroom assembly: assembly under the strictest clean conditions.

What drives us

High quality, cleanness, top-class processing and the traceability of a fully-assured production process are critical for your products and therefore crucial to Lucassen Groep.

There are good reasons why our partners have already been working with us for years. They value our open and honest communication. That transparency is also a key feature of our production facility in Sittard: the spaces are open, clean and light. We are continually investing in our people and machinery, as well as all the supporting systems, of course. That's how Lucassen Groep remains young in spirit and great in performance.

This is who we are

Lucassen Groep has a young and compact team with extensive experience. Almost half of our roughly fifty staff have been with us for more than fifteen years. Their average age is 44. We are proud that our customers see us as a partner in a long-term collaboration.

Lucassen Groep in Sittard was founded in 1989, focusing on maintenance and repairs. We now operate throughout Europe and in the United States. Our partners in the high-tech industry list the following as our strong points:

- our assistance in making things producible, thanks to...
- ...the most advanced equipment and software...
- ...in clean and conditioned environments;
- cost-efficient development of products, and above all...
- our drive to go all the way to get the results you want!

Make the difference

How cool is it if you make a miniscule component for a measuring instrument that will be sent into space? It may hardly be visible with the naked eye, but it will have a serious impact! Cases like that can become a world news.

We compare our work to playing in the Champions League, which demands a great deal from all of us, of course.

Work with us

How can we raise your product to the next level? Challenge us to create the solution you need.

Play with us in the Champions League, to get fantastic, innovative products that you would not have thought possible. Well, not until you started working with Lucassen Groep!

Call us or send us an e-mail with your challenge.
