

Competence centre for high-end drive systems

Turning ideas into solutions

Our background in developing our well-known DC- and BLDC-motors and our carefully accumulated expertise in drive technology, make maxon the one-stop-shop for precision drive systems. From design and engineering, to production, testing and support.

Efficient and flexible, in Switzerland and all over the world. We produce all key components of its high-precision drive systems on machines and production lines designed in-house. Our customers benefit from fast manufacturing of small or large series, and the high flexibility makes it easy to accommodate special requirements.

maxon brings expertise, know-how and experience to co-creation and co-development; we generate solutions, make connections and support the development of new approaches.

From microdrives for pumps, prosthetics and even implantables to fully customized drive solutions. We deliver outstanding quality, high efficiency and extremely long operating life cycles. By focusing on robotics, medical, e-mobility and aerospace we provide solutions for numerous demands.

maxon has a worldwide representation in over 40 countries, where more than 3000 employees ensure the provision of services within easy reach of our customers. Our drive solutions are produced at production sites in eight countries: Switzerland, Germany, Hungary, South Korea, France, United States, China and The Netherlands. This way we can provide solutions all over the world.
