

Our standards lead to your success

Meusburger is the market leader in the field of **high-precision standard parts**. Customers all over the world make use of the **advantages of standardisation** and benefit from the company's over **55 years of experience** in working with steel. The product portfolio ranges from **high-precision standard parts** and selected products in the field of workshop equipment to high-quality solutions in the field of **hot runner and control systems**. This makes Meusburger the **reliable global partner** for **making moulds, dies, jigs and fixtures**.

Best quality, continuous availability

Highest quality products are top priority at Meusburger. That's why we use only the best materials and carry out an in-house hardness test and spectral analysis for all of them. The stress-relieving heat treatment of all steel grades in one of our three furnaces which is standard at Meusburger also creates the best conditions for reduced plate warping of the products during machining.

On over 18,000 square metres, the world's largest central standard parts warehouse guarantees the constant availability of practically all products. This combination of quality and personal service from the large team in internal and field sales makes the Meusburger product world highly unique.

Save time and money with Meusburger

- Full-range supplier in mould, die, and jigs and fixture construction
- Top quality
- Personal consultation
- Online service
- Continuous availability
- Short lead times

Everything the mould maker needs

Meusburger's high-quality standard parts in combination with the short lead times are the ideal basis for mould making. The product portfolio ranges from mould bases with a large selection of pre-drilled and non-drilled plates, special mould bases and one-of-a-kind hot runner moulds, to products in the field of hot runner and control systems, versatile standard bars and the matching components.

Product range for die making

Meusburger's high-quality products also form the perfect basis for die making. The wide range includes standard die sets with or without pre-drilled holes, standardised dies sets for stamping and forming, progressive dies and products for the modular concept as well as transfer and large dies - everything that is necessary to work with long-term success.

Additional products for mould and die making

In addition to the wide range of products for mould and die making as well as machine and jig construction, Meusburger's wide range also includes customised machining solutions. Thanks to state-of-the-art production warehouses, short lead times are also guaranteed. The product range is rounded off with a selection of workshop equipment perfectly matched to mould and die making.

Over the years, Meusburger has optimised its product range for its customers and is regarded as a reliable full-range supplier in mould, die and jigs and fixture construction. Customers receive everything from a single source, from standard parts and products for workshop equipment to hot runner and control systems and software for ERP and Knowledge Management.
