

Engineering & product development firm

We make it work!

We make it work!

We create clarity, discover new possibilities, and help realize innovative solutions in which technology, user, and design go hand in hand.

Pezy Group was founded 25 years ago as an engineering agency, and we have grown into a full-service product development agency with a team of 85 specialists in design, engineering, electronics, and industrialization.

Since the start, we have been producing what we design in-house. That is why our pilot factory plays an important role in our design process. We are resourceful in combining technical solutions in the creation of smart and appealing products.

Every day we look for ways to work together in better, smarter, and valuable ways. We optimize development processes to create products that work. We are a passionate team that collaborates from our offices in Houten, Eindhoven, and Groningen.

At Pezy Group, we help everyone who needs support in product innovation. For the past 25 years, we have collaborated with multinationals, SMEs, and start-ups. We help you design, develop and manufacture innovative products that will have a long-term impact on your business. We do this by offering the following services:

- Project-based product development
- Interim Professionals to strengthen your team
- Small series production

Do you want to know more about how we work? Don't hesitate to contact us via nbd@pezygroup.com or +31 (0)30 635 4870
