

Pfeiffer Vacuum stands for innovative and custom vacuum solutions worldwide, technological perfection, competent advice and reliable service.

For more than 130 years, the company has been setting standards in vacuum technology with these attributes. With the invention of the turbopump, the company paved the way for further development within the vacuum industry. We continue to be one of the technology and world market leaders in this field.

Customers' requirements are typically highly complex. They relate to both the concrete vacuum need in question as well as to the specifics of the system, the materials and products being used or processed, as well as the process conditions. Quality always plays a key role in this connection. Products are constantly being optimized through close collaboration with customers from a wide variety of industries and through ongoing development work.

Products and solutions from Pfeiffer Vacuum are employed in the markets of Research & Development, Analytics, Industry, Coating and Semiconductor. The Company's main markets are located in Europe, the US and Asia.

Pfeiffer Vacuum provides a complete product portfolio:

- Turbo molecular pumps
- Oil-free primary pumps
- Rotary vane pumps
- Scroll pumps
- Leak detection
