

Producing High-tech welded and machined assemblies

Our key technologies enable us to manufacture and machine welding assemblies of high complexity.

Improved quality by smart production solutions with the following techniques:

WELDING

Craftsmanship plays a crucial role in being able to weld complex assemblies. Focused on prototype or small production series, our people are trained at various welding levels.

MACHINING

Mechanical machining of parts to complete welding assemblies in which precise tolerances are required, which are no longer feasible by hand. Accurate planes, pitch measurements and fitting holes are a few examples of what is produced every day on our Hermle milling machine.

QUALITY CONTROL

Quality management is central to everything we do. By striving for continuous improvement and delivering high-tech quality, we are fully committed to meeting the requirements and expectations of our customer.
