

Experts in Man & Machine

Industrial robots, cobots, mobile robots and AGV

As a leading player in robotics, Staubli provides efficient, reliable engineering solutions and related services to its clients around the world. The design quality of its line of **industrial robots, POWER cobots, mobile robot systems, AGV** and **software**, as well as its capacity for innovation, make it an unbeatable partner for joining the cutting edge of industrial robotics.

Stäubli Robotics can meet the needs of any industry

Wherever **speed, precision** and **reliability** are critical, Staubli robots offer the right solution. Whatever your industry, Staubli develops specific robotics solutions for the most stringent requirements.

Our robotic arms are designed to operate effectively in virtually any conditions — from the most hostile environments to the strictest cleanrooms — **with a single goal in mind: performance.**

Life sciences: how to automate processes with robots

For any product that affects human health, quality standards can never be too high. Whether you are producing implants or tablets, with our **cleanroom robots for medical technology and drug manufacturing**, you can expect maximum **precision and speed**, as well as **safety, low particle emissions and easy-to-clean surfaces.**

The same is true if you are a research institute looking for specific automation solutions. We can do even more for you if, for example, you want to automate the handling of hazardous materials in your clinic or hospital pharmacy and place great importance on operator safety and high performance. **Our robots – six-axis, FAST Picker or SCARA for clean or sterile environments – are the technologies of the future.**
