

VDL Enabling Technologies Group is a world-class system supplier of high-end equipment, combining design and manufacturing for their global customers. With 3,000 colleagues we work on complex and innovative mechatronic systems for high-tech production equipment for the development of computer chips, breakthroughs in fighting diseases, study the universe and further development of renewable energies. The combination of engineering and high-tech production facilities is what makes VDL ETG unique.

On the basis of high quality and service level in the supply of mechatronic modules we aim to exceed our customers' expectations. We have built up broad experience in the following markets: equipment for the semiconductor industry, thin-film deposition equipment for photovoltaic solar cells, analytical instruments, medical systems, science & industry and mechanisation projects.
